Hatcher, *Plague, Population and the English Economy, 1348-1530* (0977), pp 21-6, 55-62. The major challenge to this presumption that mortality was the primary determinant in long-term population change in England, at least from the sixteenth century onward, has come from E A Wrigley and R S Schofield, *Living standards and plague in London, 1560-1665*. In an era when population growth in

The Preplague Population of England

The Preplague Population of England. Sometime in the period 1300-48, English population reached its high point in the Middle Ages. All agree that it rose rapidly in the thirteenth century and dropped catastrophically in 1348-77. Its course in the first half of the century, however, is the subject of two sharply divergent opinions. One is that population increased gradually to about 3,700,000 at

Plague, Population and Economic Decline in England in the Later Middle Ages. By J M W BEAN. From the appearance of the Black Death in 1348 to the Great Plague of London in 1665 outbreaks of plague were frequent in England. The consequences of the first, and most devastating, of these epidemics - the Black Death - have already received considerable attention. But the results of the plagues

the first printed English plague orders since the proclamation of 1518. As the orders state, the plague in Westminster was of particular concern to the Queen: not only did it interfere with the conduct of the law courts, but the constant stream of visitors to the area, which was the centre of government, increased the risk of spreading the contagion. The orders, addressed to the bailiffs and

the Sweating Sickness, or English Sweat, and its arrival caused a tremendous stir. Thus, while one disease, plague, may have become less important from the 1480s, a new and menacing biological phenomenon appeared. How did this new infectious disease affect fertility and population size? This essay has two goals. First it will extend the testamentary demographic analysis from earlier in the
